

## **/The Company Introduction**

## Company Profile

Beijing NEGO Automation Technology Co., Ltd is a high-tech enterprise, founded in 2007 and guided by power electronics and control technology, specializing in wind power generation, photovoltaic power generation and smart grid fields. Beijing NEGO is headquartered in Beijing with the branches in Qinghai, Gansu, Shandong, Jinan, and other places. There is the industry base of renewable energy power generation key equipment in Beijing and Haidong districts. As the continuous innovative technical advantages and high quality requirements, the company has formed the large-scale production and operations support ability of 1GW wind power and 1GW photovoltaic core key condition monitoring equipment, even the ability to build more than 500MW photovoltaic power station system integration engineering.

and development system, the company is always exploring effective production-teaching-research cooperation model. The company has a high quality and professional research and development team, through completing several key projects in national & provincial science and technology plan and also, international cooperation projects, which obtain a number of domestic first-class and international leading achievements of scientific research. So far, the company has obtained nearly one hundred independent intellectual property rights, such as invention patents, and been
